

* To the DOE:

1 [As residents of Las Vegas my wife and I are strongly opposed to the proposed nuclear waste depository at Yucca Mountain. While we do not believe that the proposed use of the facility is based upon the results of appropriate and meaningful scientific studies, our major concern is the transportation of nuclear waste materials to the Nevada site. We believe that transporting such materials is a disaster- waiting-to-happen. There just cannot be any way the Government can guarantee the safe movement of nuclear waste from its place of origin to Yucca Mountain. Therefore we urge that the site be not given a license to operate.]
